

NFB-H & NHB-H Series

Condensing Boilers

The dynamic duo of compact, high-efficiency, wall-hung boilers

NFB-H

High-capacity condensing fire tube heating boiler.

NHB-H

Condensing water tube heating boiler.

Navien is the innovator in high-performance, space-saving condensing boilers, combi-boilers, and water heaters. Both boilers are great examples of our sleek, wall-mounted design that uses up to 80% less space than traditional floor-standing boilers. Also, gas piping capability and the ability to use PVC venting helps save on installation costs.

Before

After

Navien condensing boilers are great partners for your home hydronic heating system

Our high-efficiency compact boilers combined with radiators, hydronic baseboard heaters or in-floor hydronic systems create the comfortable even heat homeowners love, without ductwork and blowing hot air.

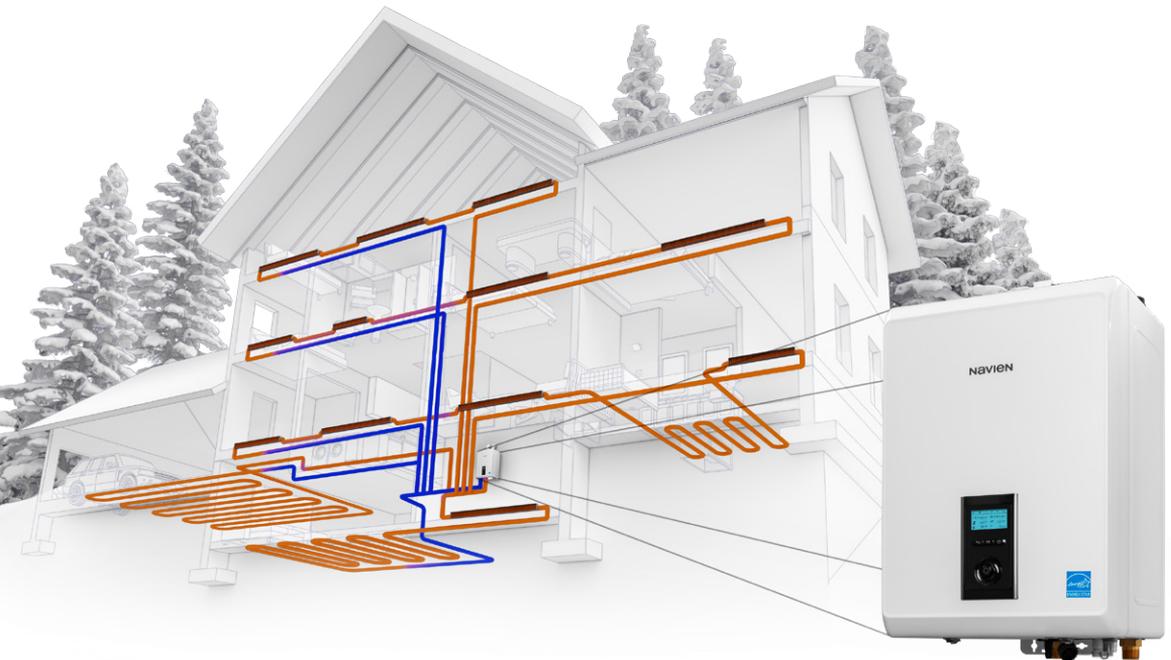

A great value with so much cost-saving technology built in

First, these boilers have an Energy Star rating of 95% which helps save money on your home heating bills. Second, you can save on installation costs with gas piping capability and PVC venting. Not to mention, it may require fewer system controls with the built-in technology to run a boiler pump, 3-zone pumps, or 3-zone valves. Navien innovation is all about giving you more bang for the buck.

95.0%
AFUE

Optional WiFi remote control system

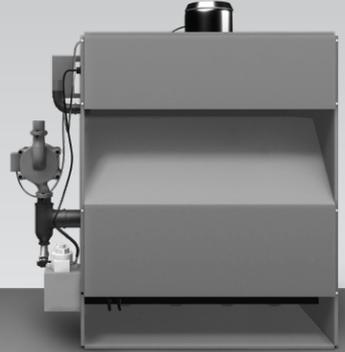

NaviLink®

This add-on accessory enables remote access via smart phones and tablets to control temperature, view usage status and troubleshooting.

Up to 80% smaller than a traditional boiler

Space-saving, lightweight design.

Optional NaviClean® magnetic boiler filtration system

Protects your investment and may reduce maintenance costs. Powerful permanent magnet for removing higher levels of iron oxide, and large canister design for capturing sludge and debris.

Expandable for larger homes

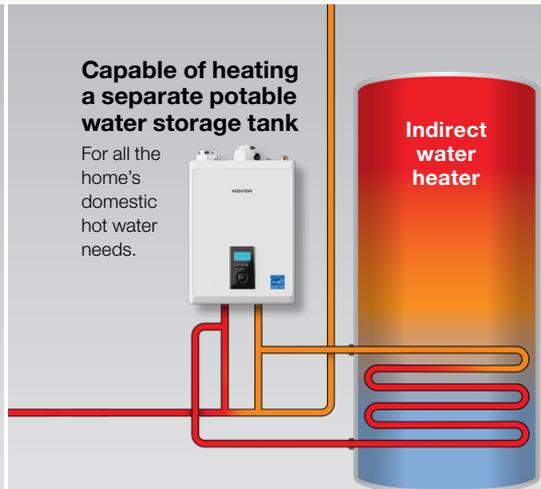

Optional residential neutralizer and replacement media

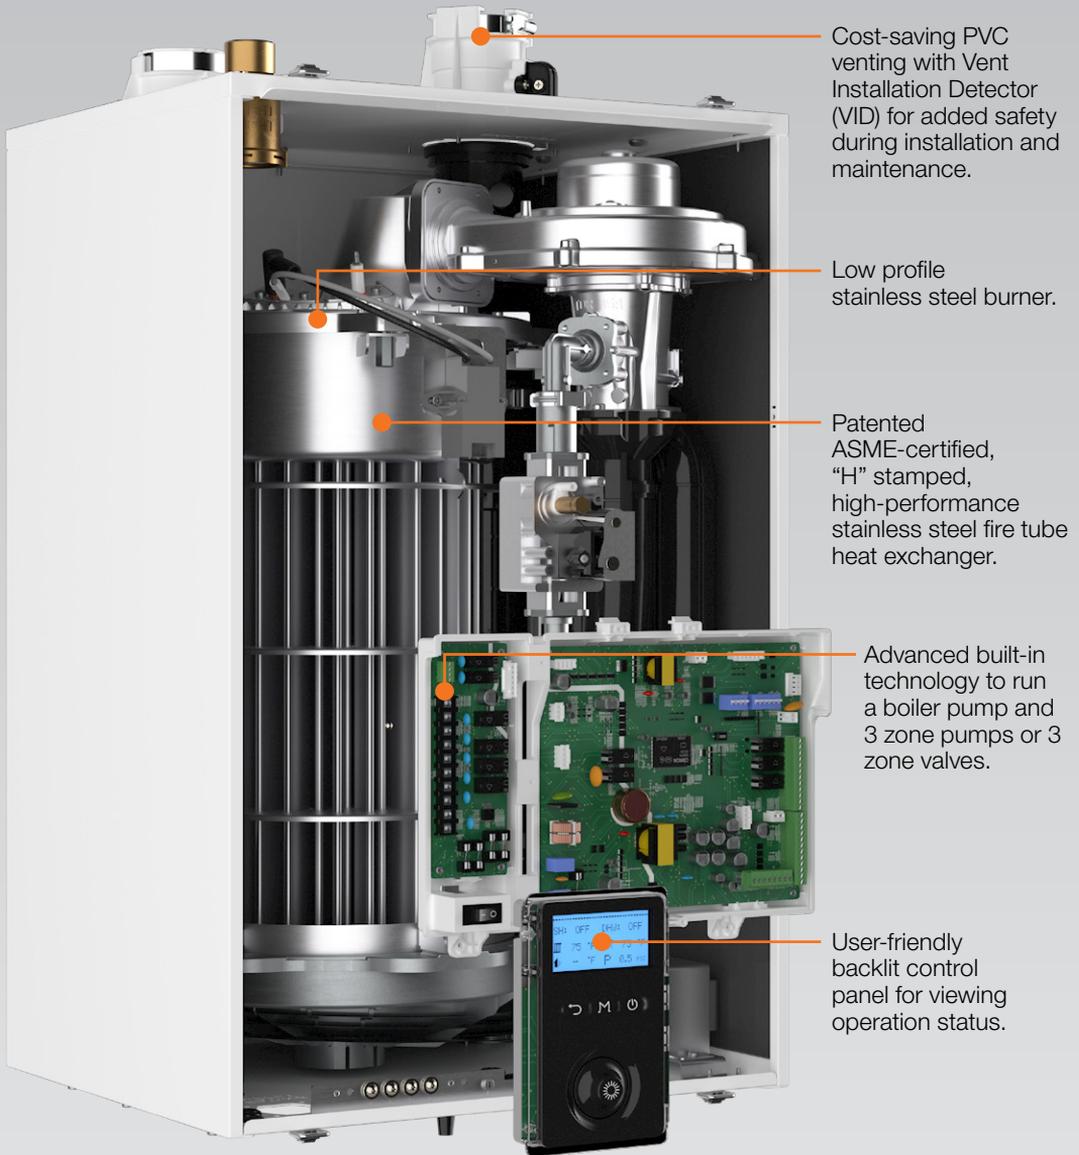

Keeps pH levels at the right level, protecting discharge to the sewer or septic systems.

Capable of heating a separate potable water storage tank

For all the home's domestic hot water needs.

NFB-H fire tube boilers

Cost-saving PVC venting with Vent Installation Detector (VID) for added safety during installation and maintenance.

Low profile stainless steel burner.

Patented ASME-certified, "H" stamped, high-performance stainless steel fire tube heat exchanger.

Advanced built-in technology to run a boiler pump and 3 zone pumps or 3 zone valves.

User-friendly backlit control panel for viewing operation status.

Two compact hydronic heating

NHB-H water tube boilers

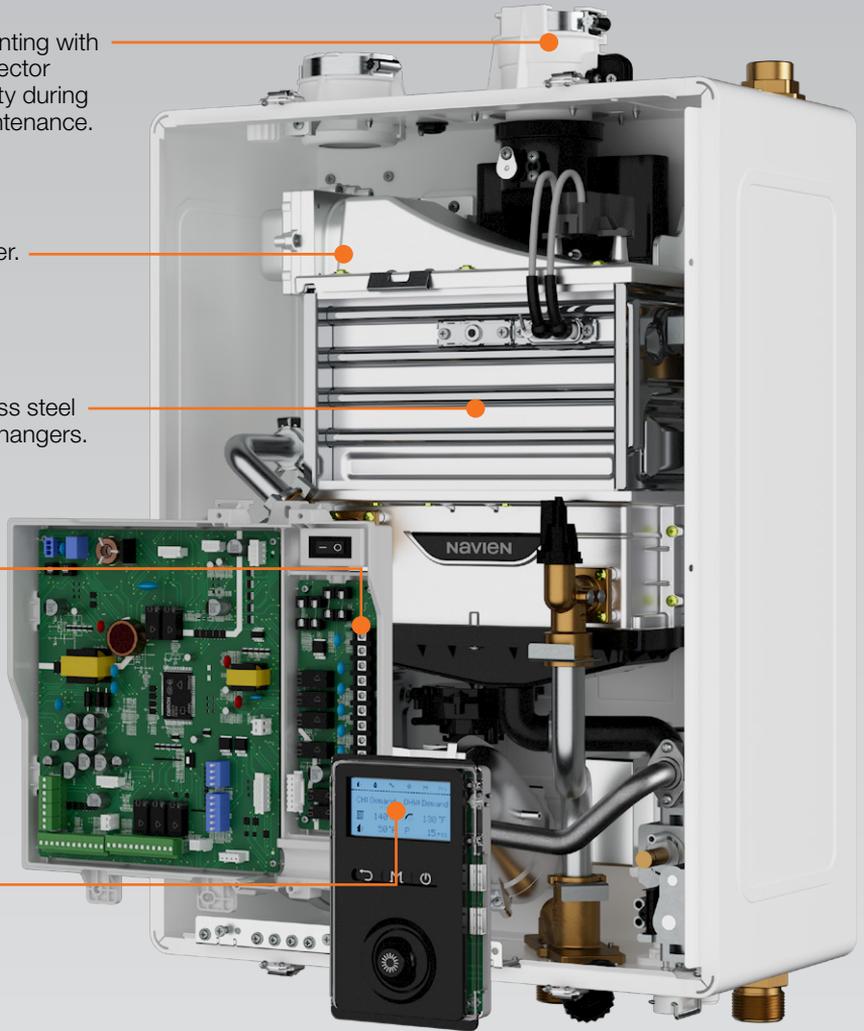

Cost-saving PVC venting with Vent Installation Detector (VID) for added safety during installation and maintenance.

Stainless steel burner.

Durable dual stainless steel water tube heat exchangers.

Advanced built-in technology to run a boiler pump and 3 zone pumps or 3 zone valves.

User-friendly backlit control panel for viewing operation status.

systems packed-full of innovation

Two eco-friendly, energy-saving systems for the planet and any size home

Our compact boilers fit well in small areas in the largest and smallest residences. Also, Navien's condensing technology reduces operating costs by maximizing heat captured from the burner. As a result, these boilers help reduce greenhouse gases and energy consumption compared to less efficient non-condensing boilers. Navien innovation is all about creating a better living environment in your home and on our planet.
